

Amendments to the Abstract:**Please rewrite the abstract as shown below:**

A gliding board (1), including a gliding surface (4) that terminates in at least one raised end (2), said the end (2) including a peripheral zone (5) and a central zone (6), the ~~The~~ peripheral zone (5) ~~extending~~ extends from the side (9) of the board toward the central zone (6) of said the end, this ~~This~~ peripheral zone (5) having has a thickness, (e1) which is less than that (e2) of the central zone (6) of the end, and being connecting ~~The peripheral zone connects~~ to the latter central zone by a discontinuity (7) that forms an inflexion, wherein the ~~The~~ width (d) of the peripheral zone (5), measured perpendicularly to the side (9) of the board, increases from the beginning of the end as far as to the highest point (12) of the end.
